

TECHNICAL CIRCULAR No. 914 of 6th March 2026

To	All Surveyors/Auditors. All flags
Title	Lightweight calculation
Reference	Inclining test

LIGHTWEIGHT CALCULATION REPORT

Even if an inclining test is not required and the stability information is not required to be updated, the lightweight calculation report should still be endorsed and placed on board with the stability booklet for future reference.

When multiple alterations are made to a ship in service over a period of time, and each alteration is within the deviation limits specified above, the cumulative total changes to the lightship properties from the most recent inclining also should not exceed the deviation limits; otherwise, the ship should be re-inclined.

REFERENCE:

- Stability calculation

ATTACHMENTS: No.
